A new, advanced formula that simplifies floor stripping. Just mop it on. In minutes, it liquefies your old floor finish. Use a wet vacuum to remove the old film. No need for floor scrubbers or expensive stripping pads.

This concentrated, water-based stripper is specially formulated for water emulsion floor finishes and waxes. It actually re-emulsifies metal cross-linked and other polymers without mechanical agitation. It's perfect for resilient tile, linoleum, terrazzo, quarry tile and concrete.

Effective

Strips the toughest, discolored, built-up floor finishes without expensive equipment. Effectively dissolves unsightly buildup in hard to reach areas and corners. Seldom a need for heavy-duty cove and baseboard strippers. No-foam formulation works quickly and is easily removable.

Economical

Advanced concentrated formulas for ultimate effectiveness and economy. Simplified method minimizes labor costs. Eliminates costly use of pads and brushes in normal stripping operations. Reduces equipment usage and application time. Cuts floor stripping time substantially.

Simple to Use

The most simplified method of floor stripping available. Unique two-step process. Eliminates the usual labor and time-consuming steps of stripping old, hard-to-remove finish buildup. No splashing on walls.

Quick Dissolving

Re-emulsification is quick. Old finishes begin to liquefy immediately. Removal is accomplished in five minutes for most jobs.

Maximizes Finish Coverage

Get up to 30% more coverage from floor finishes after using our stripper. Floor porosity remains unaffected because of no machine scrubbing. Creates no blotchy appearance.

Contains No Ammonia

No irritating ammonia fumes or annoying odor. No need to restrict floor stripping; usable in all areas including hospitals and nursing homes.

Where to Use

Hospitals • Airports • Train Stations • Laboratories • Supermarkets • Restaurants • Banks • Office Buildings • Shopping Malls • Schools • Lunchrooms • Department Stores • Restrooms • Kitchens • Fast Food Chains • Nursing Homes • Bus Depots • Nurseries • Apartment Buildings

Directions

This stripper is concentrated to maximize its effectiveness. The type of finish, number of coats, age of finish and frequency of spray buffing will determine the most effective dilution ratios. Each job will require a different solution strength. A good starting point is one part product to 2 parts water. Do not use concentrate full strength; always dilute with water. Before stripping asphalt tile, test solution on small area for color fastness. Apply the solution liberally with a string mop. Wait at least five minutes. Keep the floor wet; do not allow to dry. Use wet vacuum or auto scrubber equipped with squeegee to remove solution. Rinse the floor twice with warm water. Allow to dry and apply finish. If desired, for large areas, use this product with rotary or automatic scrubber to remove extremely heavy finish buildup. Increase the dilution to 1:5 or 1:6.
