

Brite Bonnet

Special Solvent Shampoo For Rugs and Carpets

This specially formulated solvent shampoo has been developed for use as a bonnet scrub for rugs and carpets. It cleans quickly and thoroughly and lubricates the pad to prevent damage. Contains optical brighteners to restore original beauty to carpets by enhancing colors. No residue is left to resoil easily.

The bonnet method of cleaning is the fastest, driest way to maintain your carpets. It should not be considered as a deep cleaning procedure like rotary brush shampooing or extraction. One or both of these cleaning methods should be incorporated into your maintenance program on an infrequent basis. But for a speedy way to top clean and remove spots, the bonnet scrub can't be beat. Bonnet scrubbing requires a special shampoo since there is very little detergent solution applied. With the mild action of the well lubricated mop type bonnet pad, the cleaner has to do most of the work. This product removes tough soil even when nearly dry with little or no agitation. Its solvent penetrates petroleum grease and oil and its detergent encapsulates the emulsified oil as well as water based soil to allow them to be vacuumed away easily.

This product contains no harsh alkalis or petroleum solvents which might be harmful to sensitive carpet fibers or backing. It also liberates no obnoxious or irritating odor. This shampoo will not deluster fibers due to its neutral pH.

This remarkable product may also be used as a prespray for traffic lanes when diluted with water or a "water side" spotter when used full strength. Often it is the only product you need to keep your carpets looking great.

DIRECTIONS FOR USE:

BONNET SCRUB - Dilute 1 to 10 up to 1 to 16 in warm water. Spray area ahead of buffer with Bonnet Scrub solution. Soak bonnet in solution and buff. Allow to dry and vacuum thoroughly.

SPOTTING - Use straight. Apply a small amount to spotted area and agitate with a soft brush or scraper. Blot with clean absorbent white towel. Apply a small amount of water to spot. agitate and blot again. Repeat process if spot is not completely removed.

PRESPRAYING - Dilute from 1 to 4 up to 1 to 8 with water. Spray large spots and traffic lanes with solution. Rake or agitate with a brush. Shampoo, bonnet scrub or extract as desired.
