

Proportioning and Dispensing Systems from Lyn Distributing

SinkMaster from Lyn Distributing 1-800-366-5022

SinkMaster dispensers meet the need for filling large sinks with detergent and/or sanitizer in food service applications.

Convenient, point-of-use dispensing for manual warewashing

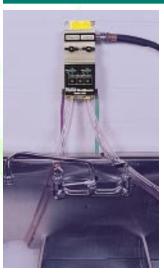

Model 883

As the focus on food service safety increases, more attention is being paid to the importance of manual warewashing. Hydro's SinkMaster allows you to conveniently fill large sinks with properly diluted solutions of detergent and/or sanitizer regardless of the size of the sink or how much solution is dispensed. No more guesswork on how much detergent or sanitizer to add, or worry about the training of new employees due to the high turnover in food service.

The SinkMaster was carefully designed to include the following benefits to food service operations:

- ▲ Ball valve operation allows use without holding or locking a button
 labor productivity increases since employees can be doing other activities while large sinks are filling.
- ▲ Label graphics make the unit easy to use, even for first-timers.
- ▲ Ultra-lean metering tip is included for today's super concentrated sanitizers.
- ▲ Rugged stainless steel construction is hygienic and consistent with other food service equipment.
- ▲ Worker safety is increased since chemical handling is virtually eliminated.
- ▲ Chemical performance is optimized by consistent, appropriate dilution. Tough standards of food service hygiene become easier to maintain.

Specifications, options and accessories

		Diluu	on minge	
Model	Flow Rate	Max.	Min.	Products Dispensed
883	3.5 GPM	460:1	3.5:1	2 Purchase on line here
8831	4 GPM	460:1	3.5:1	2 Purchase on line here

Dilution Range

199 Adaptor kit (to install water inlet from overhead rinse arm) Purchase here

SinkMaster systems are available with two types of eductors: *

- ▲ Hydro's E-Gap eductors, which provide backflow protection through use of an elastomeric sleeve. (ASSE 1055B Approved)
- Hydro's patented HydroGap IITM air gap eductors, which use a one inch gap of air between the water source and the chemical inlet to provide backflow protection. (ASSE 1055B Approved.)
